Forest structure from FORMIND

Distribution of Trees
Scenario: natural, Year: 10

Distribution of Trees
Scenario: natural, Year: 50

Distribution of Trees
Scenario: natural, Year: 450

Undisturbed Forest

Forest structure from FORMIND

Logging Scenario

Forest structure from FORMIND

Distribution of Trees
Scenario: fire, Year: 170

Distribution of Trees
Scenario: fire, Year: 172

Distribution of Trees
Scenario: fire, Year: 182

Fire Scenario

Scale dependency of forest structure

Forest structure parameters depend on the estimation **scale**:

If the estimation window is too small, the local heterogeneity dominates

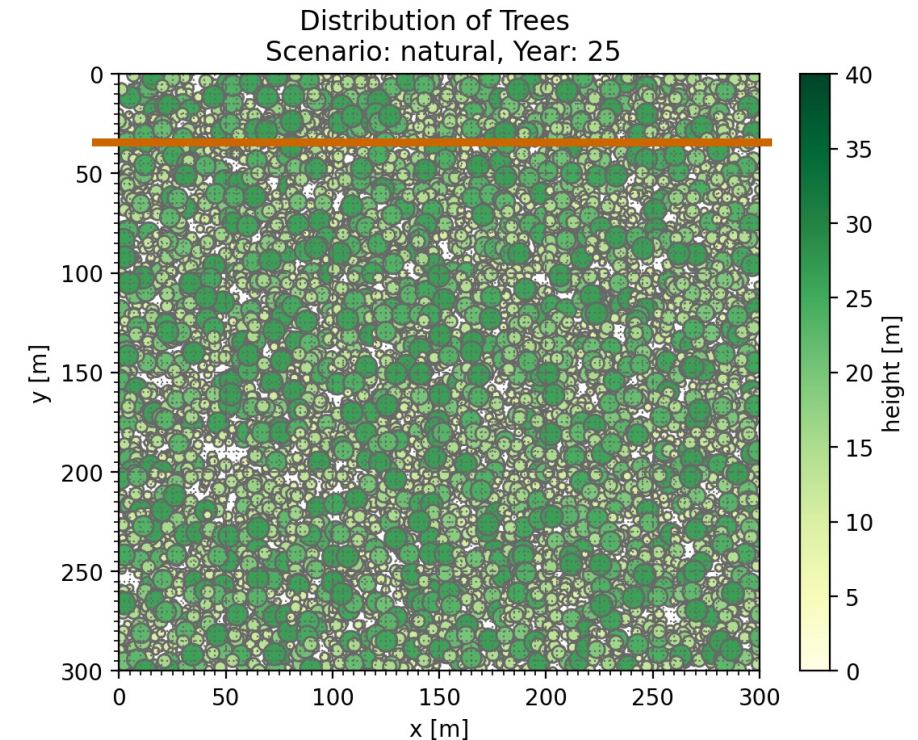

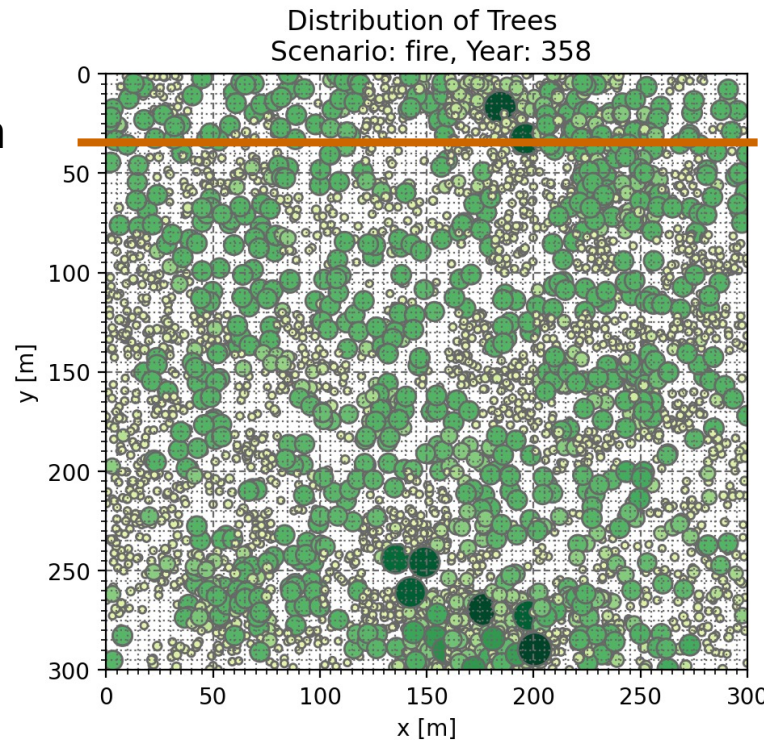

Scale dependency of forest structure

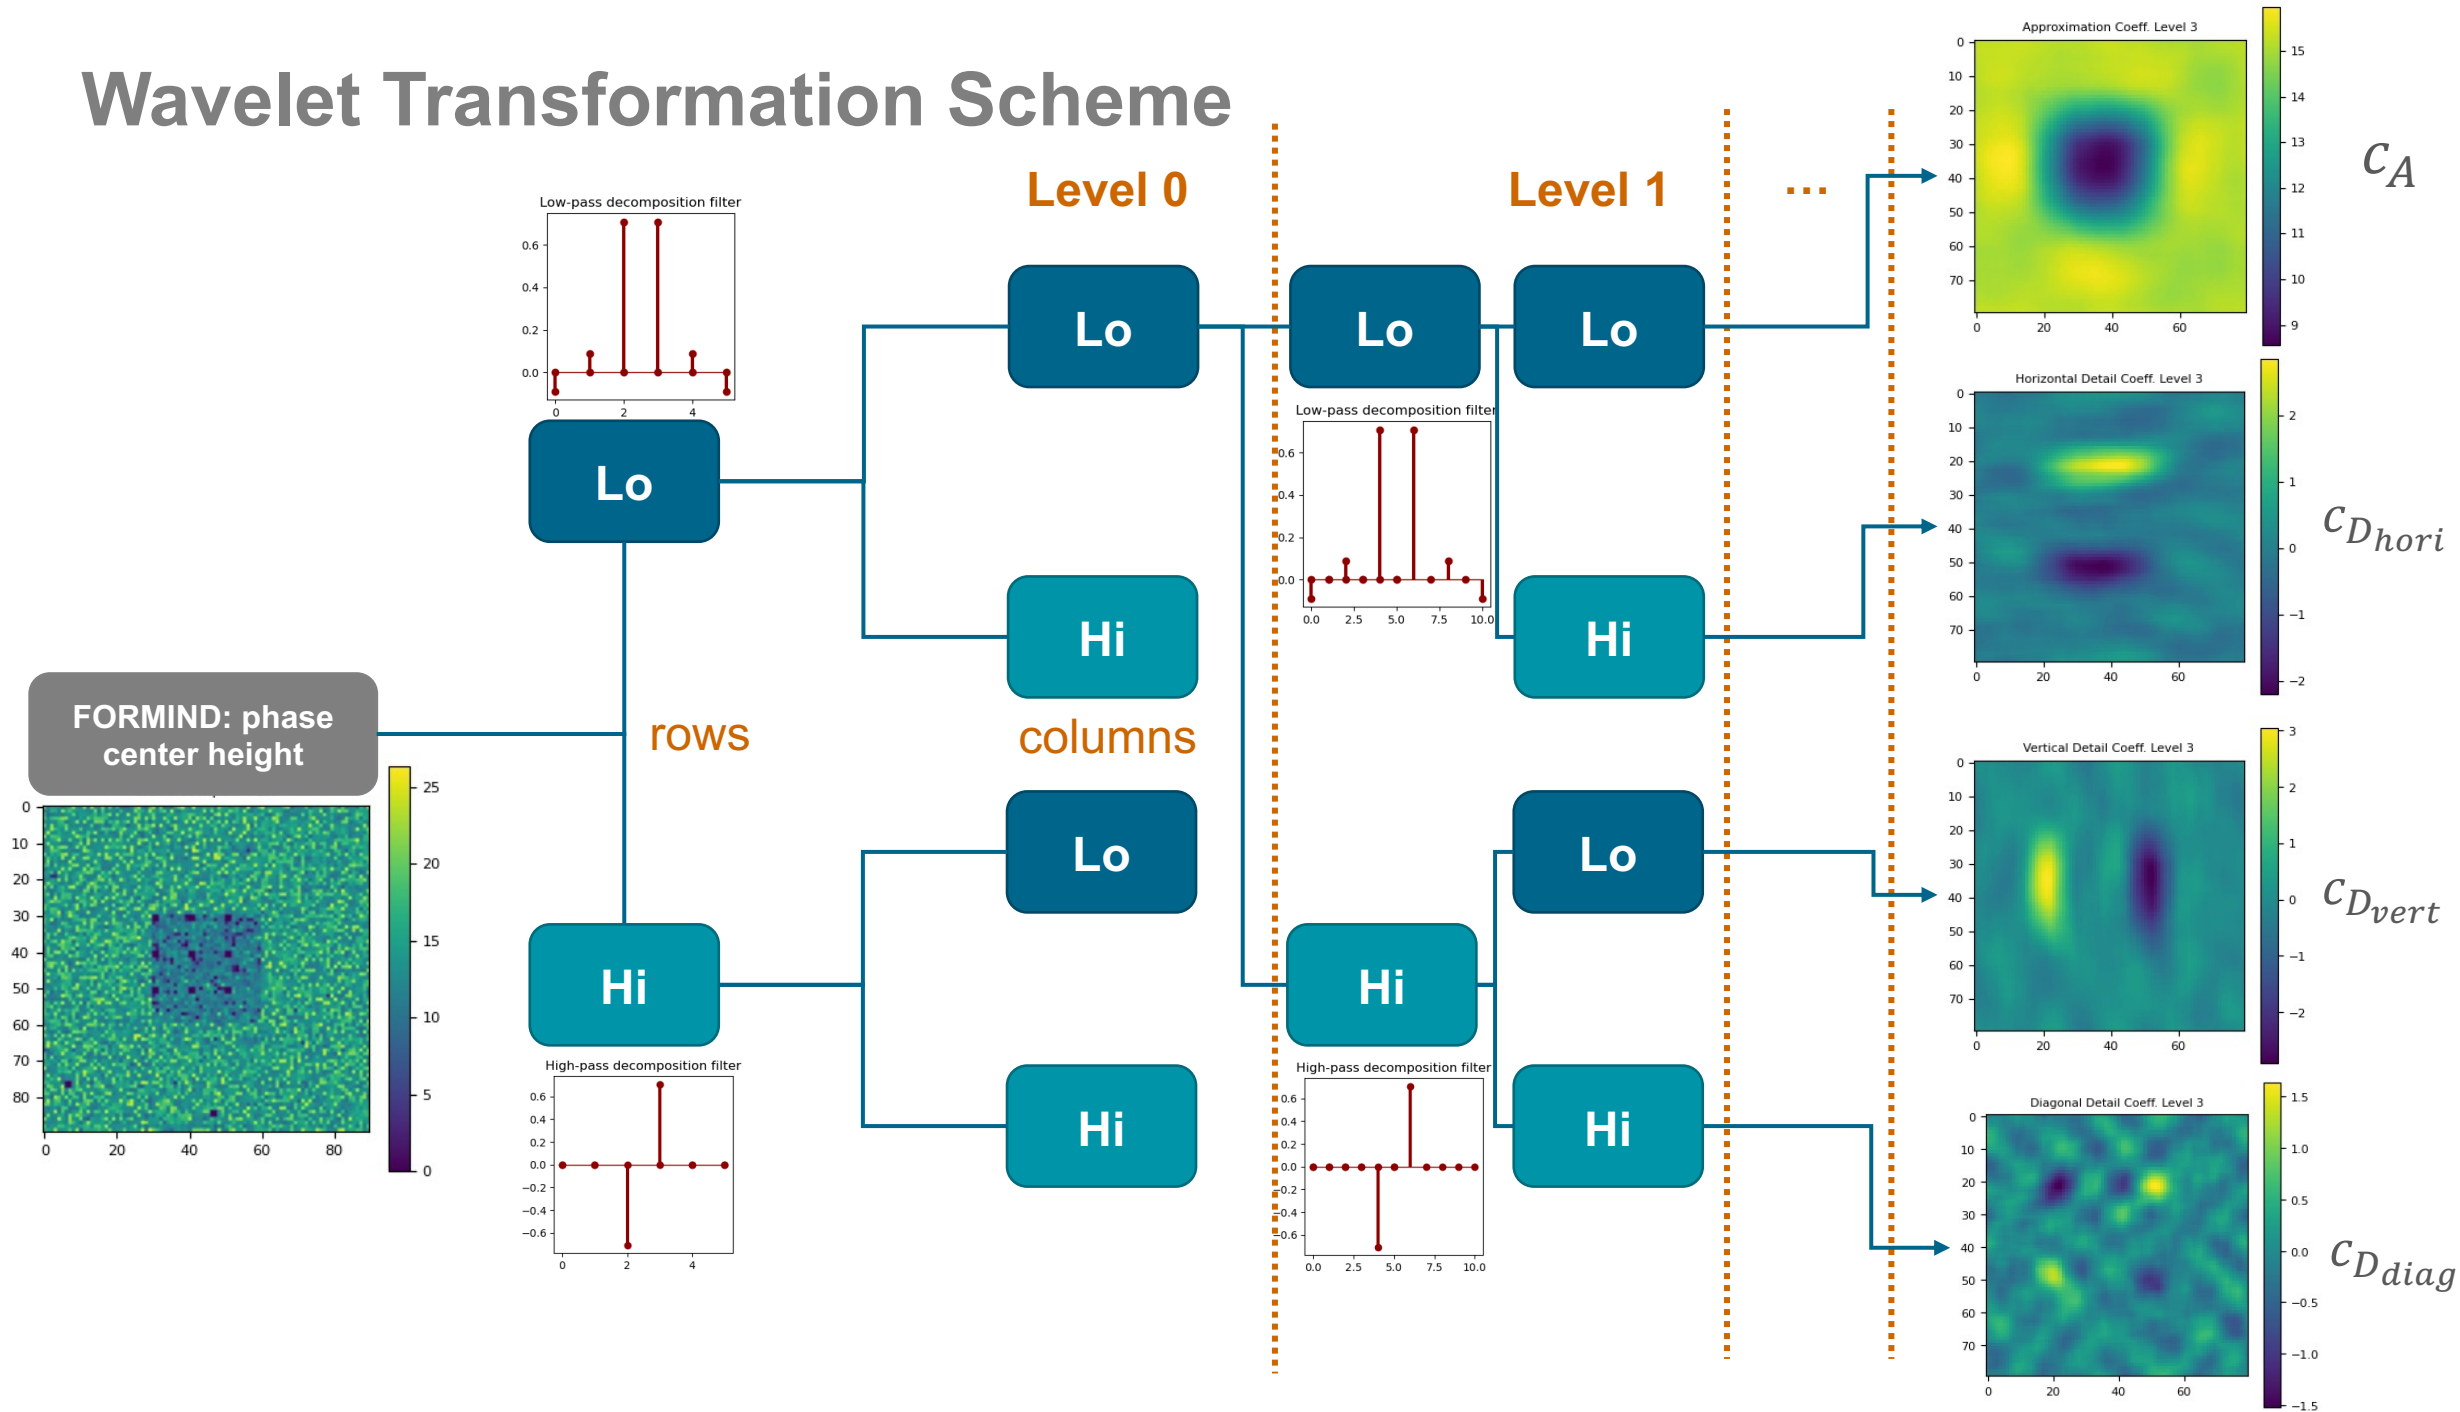

Forest structure parameters depend on the estimation **scale**:

If the estimation window is too large, it loses its sensitivity to structure variability

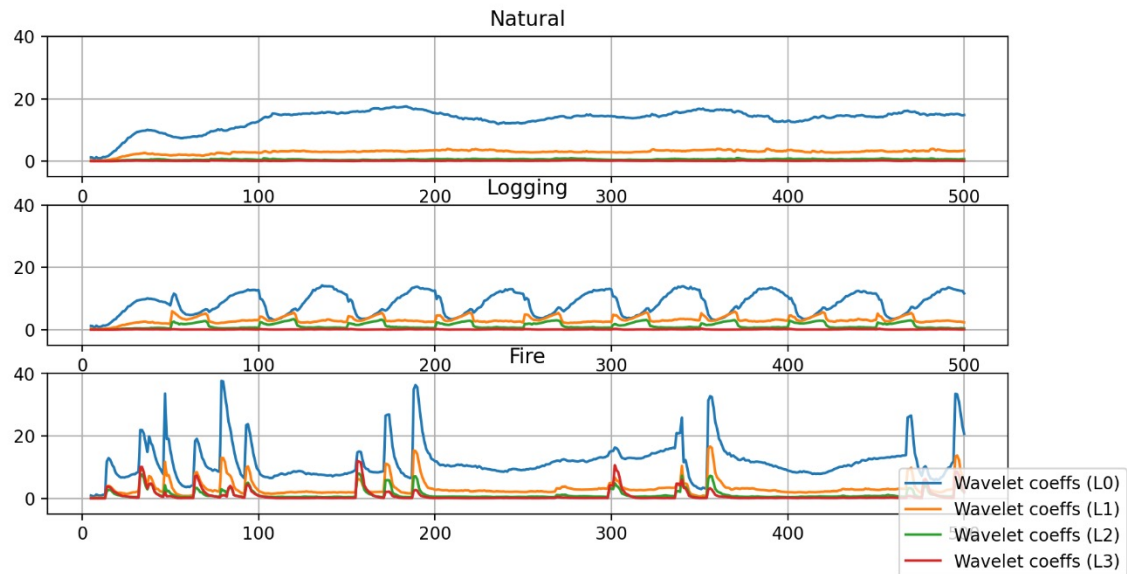

Wavelet Transformation Scheme

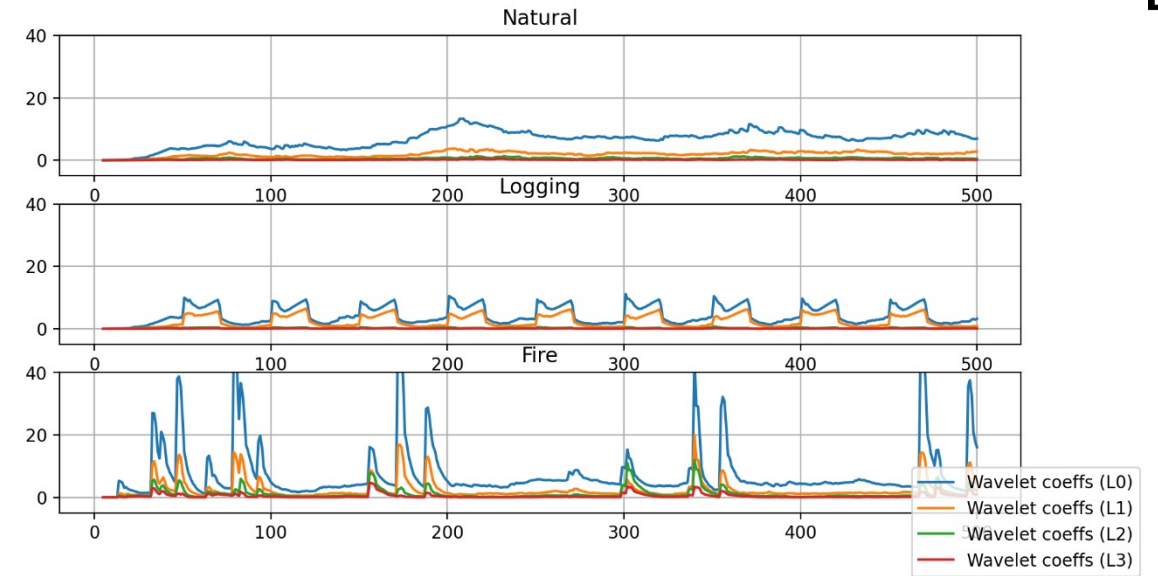

Wavelet statistics in FORMIND

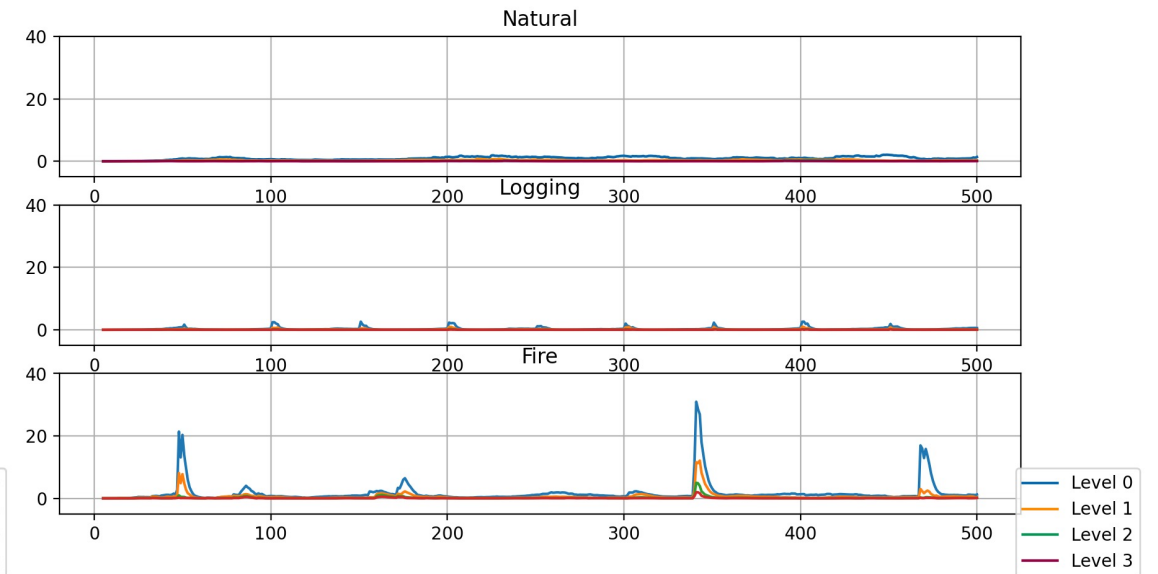

Wavelet variance for time series - Input Resolution: 10 m

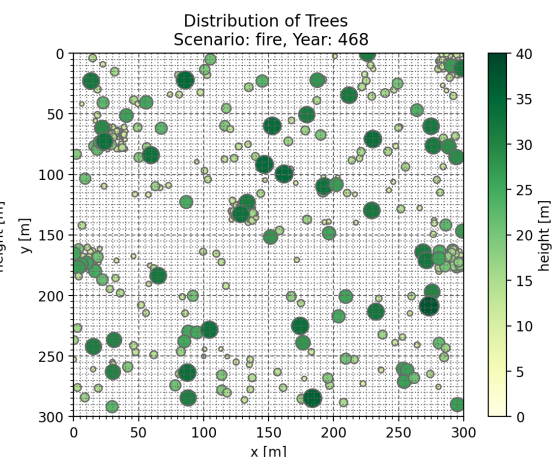

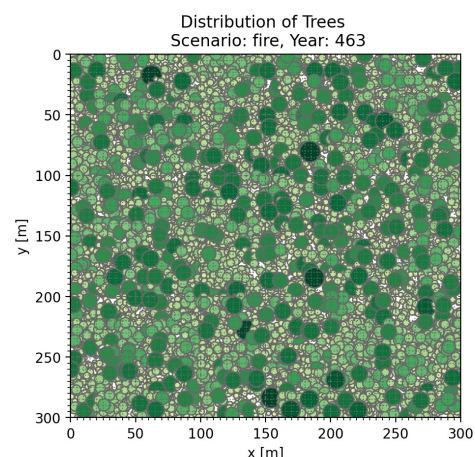

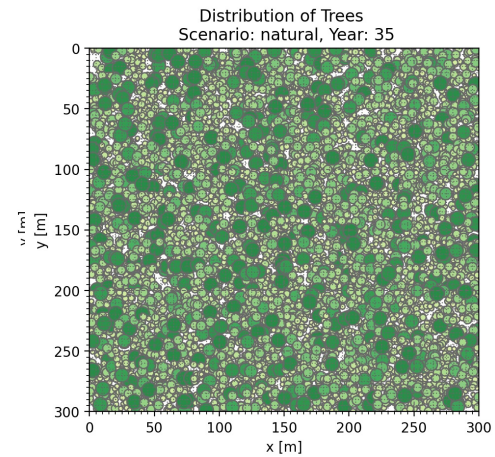

Wavelet variance for time series - Input Resolution: 20 m

Wavelet variance for time series - Input Resolution: 50 m

Wavelet statistics in FORMIND

Wavelet statistics in TanDEM-X

Test Site: Kuopio - Finland

Wavelet statistics in TanDEM-X

TanDEM-X Coherence and Wavelet Spectrum (L0) - 2012 and 2018 – Resolution: 20 m

Wavelet statistics in TanDEM-X

Wavelet Variance 2018, Resolution: 10 m

Wavelet statistics in TanDEM-X

Wavelet Variance 2018, Input Resolution: 10 m

Summary

- Forest (horizontal) structure changes at different spatial and temporal scales making its characterization a **multi-scale problem**.
- Significant forest structure change occurs already at small spatial scales and requires a high spatial resolution at “starting level”.
- TanDEM-X provides such forest structure sensitive data at high spatial resolutions.
- Wavelet analysis of TanDEM-X derived canopy height profiles allows the characterization and interpretation of the structural heterogeneity at different scales.
- The physical interpretation and the resolving of potential ambiguities is ongoing, supported by forest simulations.
